Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-14, drawn to a method of tracking inventory status sent to a recipient, classified in class 705, subclass 28.
 - II. Claims 15-24, drawn to a system for tracking status of an inventory shipment, classified in class 709, subclass 200.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product (system of Group II) can be used for a materially different process. For example, the system of claim can be used for conducting a transaction between the host and terminal computers.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
4. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Art Unit: 3627

5. During a telephone conversation with Mark Stuenkel on 4/15/04 a provisional election was made without traverse to prosecute the invention of Group II, claims 15-24. Affirmation of this election must be made by applicant in replying to this Office action. Claims 1-14 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

7. Claims 15, 16, and 23 are rejected under 35 U.S.C. 102(e) as being anticipated by U.S. Patent Application No. US 2003/0195811 A1 (hereinafter “Hayes”).

Regarding **claim 15**, Hayes discloses a system including a host computer (12) and a terminal (see paragraph 0027), the host computer and terminal communicating information related to the delivery and confirmation of a shipment (see paragraph 0049) and further including the host transmitting a notice to the terminal indicating that the shipment has been sent (see Figure 5D).

Claim Rejections - 35 USC § 103

8. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 3627

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

9. Claim 16-22 and 24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hayes in view of U.S. Patent No. 5,638,283 (hereinafter "Herbert").

Hayes disclose all the elements as set forth above, but fails to disclose inhibiting operation of a terminal and enabling operation of terminal.

Herbert teaches the use of inhibiting operation of a terminal and enabling operation of a terminal when conditions for operating that terminal provide a security risk (see column 4, lines 38-45).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Hayes with the inhibiting feature taught by Herbert, because preventing use of a terminal during security potential security lapses helps reduce the chance of damage from the potential security problem.

Conclusion

10. The prior art made of record and not relied upon is considered pertinent to Applicant's disclosure.

Brandient et al. is cited of interest for disclosing a system for tracking the receipt and internal delivery of items.

Barra et al. is cited of interest for disclosing a method and apparatus for providing a service to transfer messages over a communications network.
